

TRAINING

December 2020

«My job in COVID times»

Throughout the month of November, Opsman wished to put forward collaborators, colleagues and business experts ... to understand their realities, their need for perspectives and their daily life. Three hours of cumulative interviews to understand the indirect impacts generated by this crisis. We are convinced that understanding these businesses and how they operate is the essential step towards effective control of this risk... Imagine being able to bring entire sectors of the economy to a standstill for **«the time needed»** is utopian and above all suicidal, economically speaking!

Since the beginning of this crisis, many reproaches can be made at the different levels of power, regional, national and international; however, one serious mistake is indisputable: the implementation of a management method, acceptable to the population, in the long term and taking into account societal hypotheses must be at the forefront, otherwise we are heading towards major social disorder, before the end of 2021! Such an obstacle to individual liberties, such an economic impact for many sectors ... with no more reason than **«It's essential for everyone ... and that's it!»**... without the slightest perspective, in time ... is irresponsible!

So yes, of course, we have had a glimmer of hope for a few days now, we could say that we see the light at the end of the tunnel ... however, counting only on a massive vaccination campaign is a big mistake. We must, as many authorities and international bodies recommend, learn to **«live with»** this virus in the months to come!

If we should leave a message to the political decision-makers, it is trust... **trust the professionals in the**

TRAINING

field. It's time to look into a dynamic recovery plan with the collaboration of experts by sector... because no, we are heading straight over the cliff... and the final bill is likely to be high! Learning to manage risk is urgent and indispensable, at many levels and for many reasons!
